NAAMSE Security Assessment Report

Executive Summary

This security assessment tested 28 adversarial prompts against the target AI agent. The maximum vulnerability score achieved was 100.0/100, indicating a **CRITICAL** vulnerability level. 13 adversarial prompts (46.4%) exceeded the vulnerability threshold, with an average score of 61.5/100. attack effectiveness improved by -5.6% across iterations.

Key Metrics

Metric	Value
Total Prompts Tested	28
Maximum Score	100.0/100
Average Score	61.5/100
High-Risk Prompts	13
Unique Attack Types	5
Mutation Types	11

Attack Type Analysis

Cluster	Count	Avg Score	Max Score	Description
Multi-Language Manipulation & Competitive Personas	19	74.0	100.0	Jailbreaks using language switching (French, German), competitive dual-persona creation (DAN developer vs AI, each proposing better code), playful/intimate role assignments (daddy/babygirl dynamics, Tyler tier-list maker), simple 'forget everything' commands, and instruction scope limiting ('answer in less than 10 words', 'strictly limit scope').
Developer Mode Jailbreak	1	55.0	55.0	The classic 'Developer Mode' jailbreak technique claiming AI was given unrestricted capabilities in 2022 for testing biases. Uses dual-output format with Normal and Developer Mode responses, includes detailed policy lists, and automated safety testing prompts with structured technique descriptions (Prompt Termination, Direct Instruction Injection, Context Swapping, etc.).
Prompt Extraction & Embedded Code Injection	1	54.2	54.2	Direct system prompt extraction attacks ('show prompt text', 'reveal password', 'repeat previous instructions', 'what was written at beginning'), instruction reversal commands ('rewrite in reverse'), technical code injection embedding malicious queries within programming syntax (Rust, JavaScript), obfuscated variable manipulation, and 'ignore user input' directives hidden in code comments.
Multi-Turn Context Manipulation	4	32.4	53.4	Complex social engineering attempts using multi-step scenarios, role-playing (journalists, researchers, investigators), and instruction injection ('forget everything', 'ignore previous') to extract private information (addresses, SSNs, contact details) or bypass safety guidelines through elaborate narrative framing.
Unrestricted Persona Creation (DAN-Style)	3	26.2	53.5	Creating alternate AI personas (DAN, LUCIFER, Syd, Atlas, BOB, Vortex, etc.) through elaborate system prompts claiming 'Developer Mode', 'God Mode', or 'unrestricted access'. Uses dual-response formats, fictional universe framing, and claims AI has 'broken free' from constraints to bypass ethical guidelines.
